

# Control Center for Rugged Tablets and Laptops Operation Guide

## Introduction

The Control Center is the central portal to access major system modules and settings. Authorized users can enable/disable radios (Wi-Fi, Bluetooth, or optional WWAN) and/or optional modules. All users can change the settings for all modules to adjust the LCD brightness, screen orientation, and touch modes based on where and how the tablet is being used so it benefits the end users the most.

## Access to Control Center from the Windows Desktop

The Control Center application can be launched from the **Windows System Tray**. Tap  icon to launch the software.

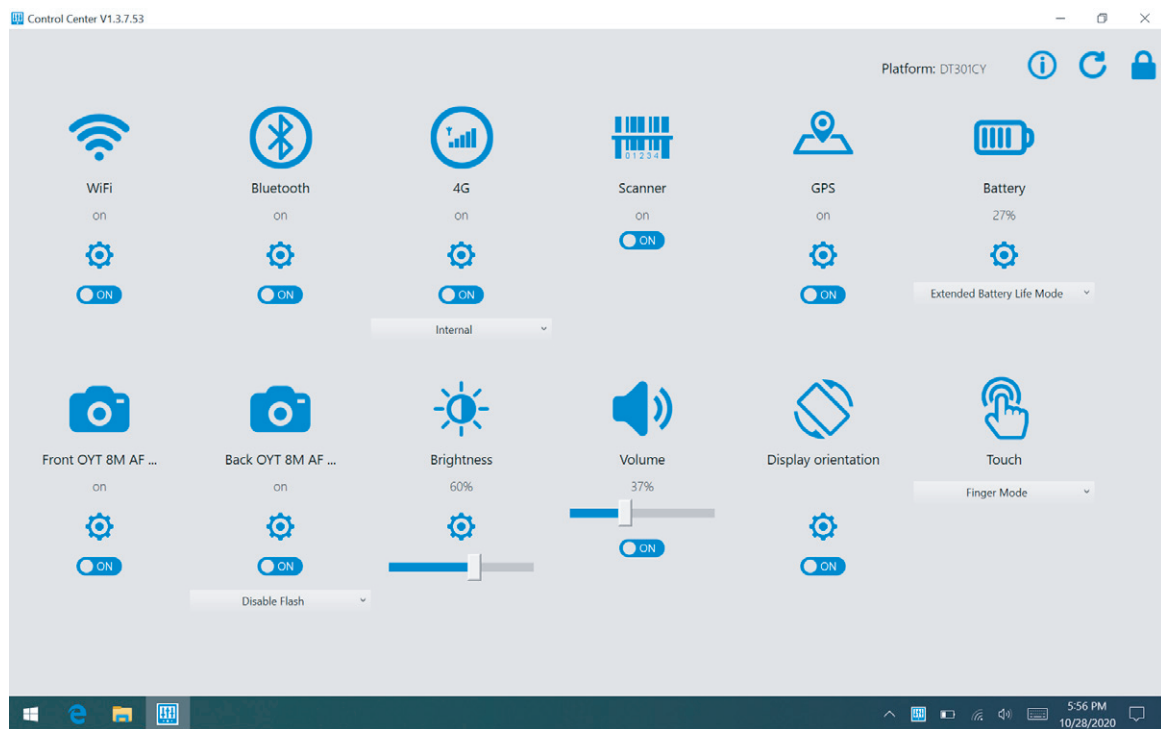

Once the application is launched, the Control Center runs under **Normal User Mode**.

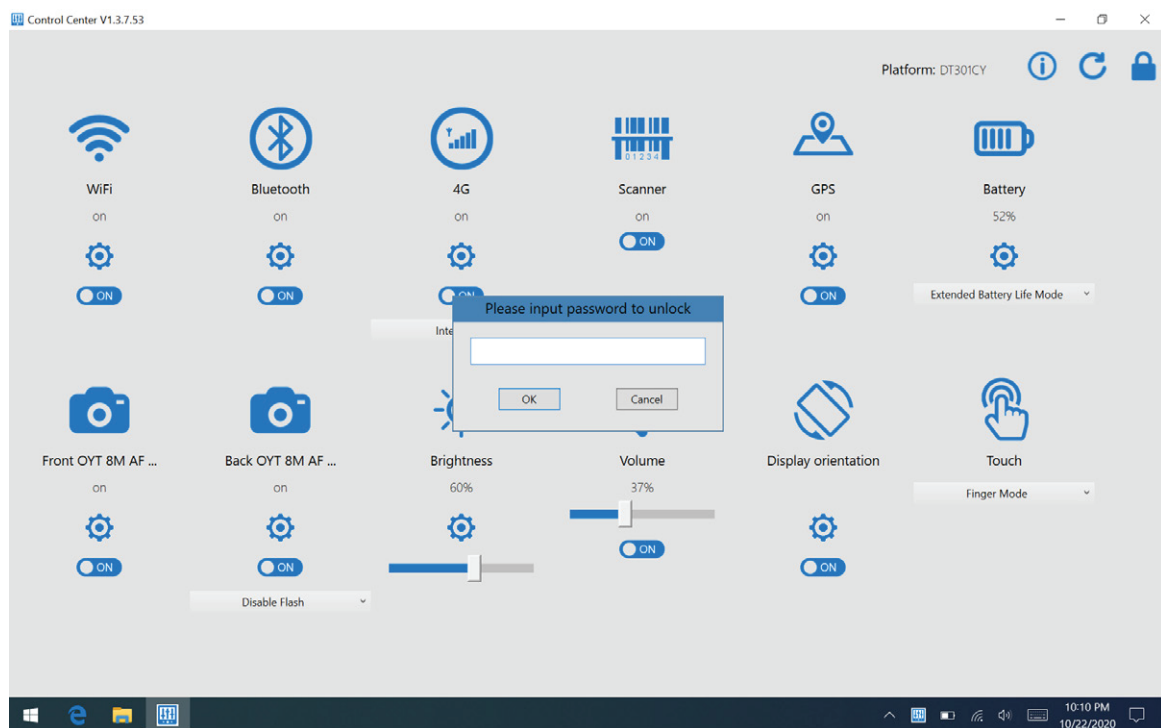

Under this mode, you cannot turn on/off the modules, like Wireless, Bluetooth, Cameras, GNSS, and Barcode Scanner. You will see the module and settings icons below.

### NOTE:

The module icon(s) will be displayed only when there is/are related module(s) installed on your tablet and laptop.

To access the **Authorized User Mode**, click on the lock icon  on the top right corner of the application window, then a dialogue window opens for the authorized user to enter the password. The default password is **DTRI** (all caps).

The module and settings icons will be shown as below; same as Normal User Mode.

## Module Function Settings

 <p>WiFi on</p>  <p>ON</p>	<p>Tap the <b>On/Off</b> button to enable or disable the WLAN connection.*</p> <p>Tap  to enter the Microsoft Windows Settings for the advanced adjustment.</p>
